

SWAP (System-Wide Analytics and Projection) Tool: The 2015 Transitional Housing Program Performance Analysis

The Orange County Continuum of Care (CoC) began work on re-designing the homeless system of care by approving the 10 Year Plan to End Homelessness in 2012. This plan is the product of an integrated community collaboration, and was written both to comply with federal policy direction, and to create and realize the greatest possible reduction in homelessness in our community. Achieving this goal requires the community to understand how resources are invested, the capacity of the current system to serve homeless families and individuals, and the likely result of alternative approaches.

In 2013 and 2014, the Orange County Continuum of Care used the Program Performance Report commissioned by 2-1-1 Orange County (211OC) and created by Focus Strategies for each agency's project(s). In 2015, 211OC produced the Program Performance Report by using the HUD approved SWAP (System-Wide Analytics and Projection) Tool developed by Focus Strategies in collaboration with the National Alliance to End Homelessness (NAEH). The SWAP Tool is a suite of tools designed to help communities plan and prioritize changes to bring about the greatest possible reduction in homelessness. The SWAP Tool has the ability to generate performance measurement reports on: Exits to Permanent Housing, Annual Household Utilization, Percentage of Household Entered from Homelessness and Did Not Enter from Homelessness, Length of Stay, and Returns to Homelessness.

These reports present analyses of data from the local Homeless Management Information System (HMIS) and the HUD-mandated Housing Inventory Count (HIC) of each program. The objective of the analysis is to assess how both individual programs and the system as a whole are performing in relation to the goals of the federal HEARTH Act, as well as provide support for, and transparency to, the decision making process. The primary focus of the individual program information is to assess a program's demonstrated ability to serve individuals who have experienced literal homelessness and assist them to move to permanent housing as quickly as possible. Although the HEARTH Act has several goals that include decreasing length of time homeless, returns to homelessness, first time homelessness, and the total number homeless people, as well as increasing coverage of homeless populations and job and income growth, these indicators ultimately relate back to the goal of ensuring no one is homeless longer than 30 days.

The 2015 Program Performance Analysis includes enrollments active in the Orange County HMIS between 1/1/13 and 12/31/14. One intended use for this latest set of reports is for the Orange County CoC to include the information as part of a HUD grant application rating and ranking process. This allows the CoC to consider HEARTH performance measures in deciding whether and how funds are disinvested from transitional housing and shifted to rapid re-housing and permanent supportive housing, which are HUD priorities. 211OC envisions the Analysis being used by agencies, funders and stakeholders alike, and encourages agencies to share the report with private and public funders as well as the community. 211OC believes in the community's commitment to make system change, and together we can help to move Orange County forward in "right-sizing" our homeless system of care, allowing organizations and decision-makers to make more informed decisions, including prioritizing programs and system-wide policies that best serve the needs of the Orange County community.

Please be aware as you view this report that only Transitional Housing and Permanent Supportive Housing projects were included in this analysis, as these were the project types ranked for the CoC NOFA. However, the analysis includes all Transitional Housing and Permanent Supportive Housing projects in HMIS, not just those that are HUD funded. Only Transitional Housing or Permanent Supportive Housing projects that did not have two years of data were excluded from the analysis. In addition, Rapid Re-housing projects were excluded from this year's analysis because none of these projects had two years of complete data at time of analysis.

Reading the SWAP Tool

As you view the SWAP Tool you will find the below terminology. We provide context and definitions to help you better understand and utilize the tool.

Capacity Data was taken from the 2014 HIC (Housing Inventory Count), which is a count of all beds dedicated to serve homeless clients in Orange County.

Annual Utilization Rate shows the utilization rate for each project based on the imported HMIS data and HIC data. Utilization may not be completely accurate for voucher projects because this is not based on total vouchers in use, but beds and units reported on the HIC. Utilization is based on enrollments between 1/1/14 and 12/31/14.

HH Entries from Non-Homeless Prior Living shows the percentage of households that entered from each of these categories: institutional, housing, other, and unknown. Only households with enrollment dates between 1/1/14 and 12/31/14 were included in this calculation.

HH Entries from Homeless Prior Living shows the percentage of households that entered from each of these categories: unsheltered, emergency shelter, unsheltered or emergency shelters, and transitional housing. Only households with enrollment dates between 1/1/14 and 12/31/14 were included in this calculation.

PH Exits that Return to Homelessness is the percentage of households that exited to a permanent housing location and returned within a year to either an ES or TH program.

All Exits that Return to Homelessness is the percentage of households that exited the project and returned within a year to either an ES or TH program.

Permanent Housing Exits is the percentage of exited households that exited to permanent housing. Only households with exit dates between 1/1/14 and 12/31/14 were included in this calculation.

Average LOS (days) is the average of the length of stays for all households that exited the project between 1/1/14 and 12/31/14.

Colors: Each of the 6 measurements has a different color. The measure being reported on is on the right-most column header of each page (Utilization Rate, Household Entries from Non-Homeless Prior Living, Household Entries from Homeless Prior Living, PH Exits that Return to Homelessness, and Average Length of Stay).

Questions?

For more information about the SWAP Tool, please visit <http://focusstrategies.net/swap/>.

Should you have additional questions please contact 211OC's Data and Analytics Manager, Erin DeRycke at ederycke@211oc.org.
